

From the most prestigious residences to modern apartments and commercial applications Addstyle is proud to offer you the highest standard in solar control fabrics with a view.

Sunscreen blinds give you the best of both worlds. The screen protects you from the troublesome and dazzling sunlight and keeps the outward view unobstructed.

The feeling of space as well as your view of the outside world and your privacy remain unimpaired. Inside areas still remain bright, with enough incoming sunlight to make artificial light unnecessary most of the time.

Our Commitment to Quality

All our blinds are cut using the latest crush cutting technology which cuts and seals the fabric preventing frayed and wavy edges.

Addstyle blinds has teamed with Mermet to bring you the most extensive range and technically advanced fabrics available. Mermet's internal sunscreen fabrics block between 89% and 96% of UV rays, protecting your flooring and furniture from fading and can reduce your energy consumption by up to 33%.

MERMET

Mermet gives a 5 Year Warranty on their Sunscreen Fabrics

Addstyle roller blinds are made with Acmeda components and roll tubes. Acmeda are considered leaders in the manufacture of quality components and are regularly copied by cheaper overseas competitors. Addstyle will always select the best components for our roller blinds - not the cheap copies.

We believe that our method of manufacture along with Mermet fabrics and Acmeda components brings you the best Sunscreen Blinds available. Also available in motorized.
